Mark holes through rail utilizing leveler bubble to ensure level positioning prior to marking. Drill 1/8" pilot holes and install #10 X 1-1/4" screws into studs. Tighten screws firmly.

*For additional mounting in drywall only, use 7/32" drill bit for pilot hole for drywall anchor provided. Drywall anchors should be installed directly into drywall and then rail placed over the anchor and fastened with #10 X 1-1/4" screws. Mounting into drywall is only recommended to aid the mounting of the rail for the mounting holes not utilized by wall studs.

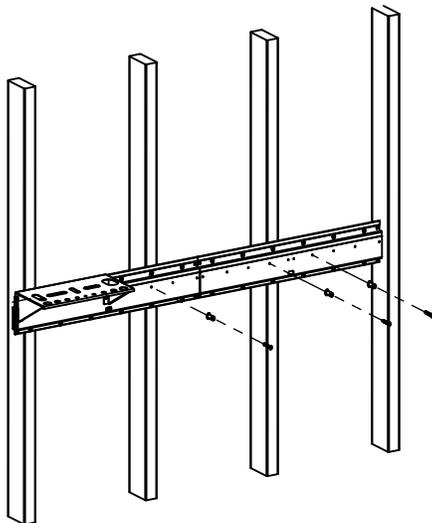

- 2** Slide Connector/End cap into mounted rail and repeat installation for second rail.

IMPORTANT NOTE: To achieve full loading performance rails must be firmly attached into wood studs, using drywall anchors along top edge for additional support.

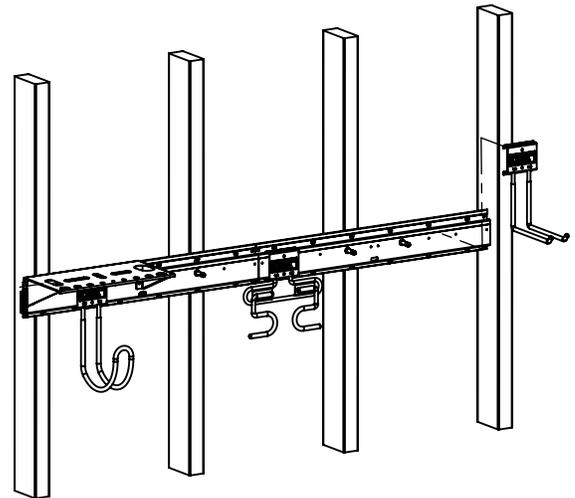

- 3** Install shelf by hooking its top retaining flange into the channel of the flange at the top of the rail and position along rail at desired location. Installing #8 X 1/2" screws into predrilled holes in rail. Tighten screws firmly.

- 4** Insert Connector/Endcaps into remaining 2 ends of rail.

- 5** Install pegs onto rail and position along rail at desired location. Installing #8 X 1-1/2" screws into predrilled holes in rail. Tighten screws firmly.

- 6** Install hook accessories on rail in desired position. Hook top of mount plate into rail and pivot bottom down to lock into place. Reconfigure hook locations as necessary.
